

# Visualization

## Overview

Data visualization can play an important role in research, specifically in data analysis complementing other analysis methods, such as statistical analysis. But visualization can also play a role in communication and PR.

Depending on the goal for a visualization and its intended audience different visualization styles can be used:

## Support

SURF supports its users on the topic of visualization with:

- Support for performing visualization on SURF infrastructure, both for interactive visualization and batch rendering
- Providing courses on visualization
- Realizing targeted visualization projects for users, including software development
- Contribute to innovation activities of SURF, such as using [Virtual and Augmented Reality](#). This also include development of proof-of-concept and demonstrators using such possibilities.

## Visualization on SURF infrastructure

Detailed information on performing visualization tasks on SURF infrastructure can be found [here](#).
